

How to unzip a file

Go to the zipped [compressed] file you have just downloaded and right click on it

Select "Extract All"

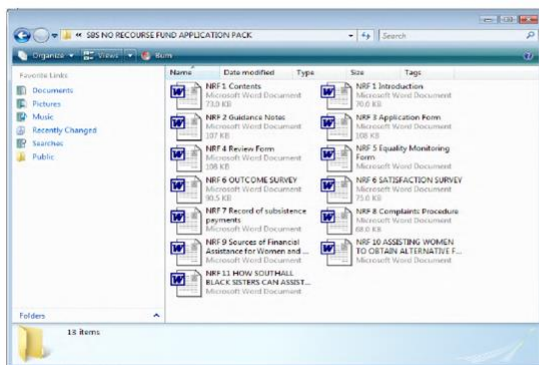

A dialog box will pop up asking you to select a location on your computer for the extracted files.

Select a location

Then click "Extract"

Extraction usually only takes a few minutes depending on how large the file is.

Once extraction is complete your files will then be visible in the location you selected.

If you experience any problems unzipping the file please contact Tech support:
